Hurricane Lake
318 Acres

Location
Hurricane Lake is in a secluded area of the Blackwater River State Forest in northwest Okaloosa County. It lies north of State Road 4, approximately 12 miles northwest of Baker. Concrete boat ramps with ample parking are located at the north and south campgrounds.

A fishing pier is also located near the north boat ramp. Kiosks provide lake and regulation information while fishing fingers offer shore access around each campground. Bathroom facilities, camping and picnic areas are provided by the Florida Forest Service. For reservations contact Reserve America at (800) 326-3521.

A fishing license is required for residents, 16-64 years of age, and non-residents, 16 years of age or older, to fish by any method (including cane poles).

### Daily Bag Limits

- **Largemouth Bass**: Daily bag limit of 5 fish per angler. No minimum size, only one fish may be 16 inches in total length or longer.
- **Channel Catfish**: Daily bag limit of 6 per angler.
- **Panfish**: Daily bag limit of 50 per angler.
- **Crappie**: Daily bag limit of 25 per angler.

---

**FISH SPECIES**

**Bluegill and Redear Sunfish** – Often referred to as “bream,” Hurricane Lake holds several species of sunfish. Congregating around structure, vegetation, or spawning over bare spots on the bottom, known as “bream beds,” these panfish can provide non-stop excitement for anglers. Crickets, worms, or even jigs fished underneath a cork are effective methods. A small rooster tail spinner or beetle spin can also provide a fun way to catch these feisty fish.

**Largemouth Bass** – This popular sportfish tends to hang around structure or vegetation. In the springtime, they can be targeted spawning in shallower areas of the lake while they generally seek deeper, cooler water during the summer. Plastic worms, spinner baits, crank baits, and even topwater lures can all be used to catch these aggressive fish.

**Channel Catfish** – These hard-pulling fish generally inhabit the deeper areas of the lake and tend to become more active after the sun goes down. Catfish use their “whiskers” to locate food, so baits that emit an odor will be the most successful at enticing a bite. Chicken livers, beef livers, worms, and commercial “stink baits” fished on the bottom are the most effective methods.

---

**FMA Special Regulations**

A fishing license is required for residents, 16-64 years of age, and non-residents, 16 years of age or older, to fish by any method (including cane poles).

**Boating and Facilities**

- Gasoline powered motors are prohibited, only electric motors are permitted for use.
- No motor vehicles are allowed on the dams, spillways, or fishing fingers.

**Daily Bag Limits**

- **Largemouth Bass**: Daily bag limit of 5 fish per angler. No minimum size, only one fish may be 16 inches in total length or longer.
- **Channel Catfish**: Daily bag limit of 6 per angler.
- **Panfish**: Daily bag limit of 50 per angler.
- **Crappie**: Daily bag limit of 25 per angler.

---

In 1971, the Florida Fish and Wildlife Conservation Commission constructed an earthen dam across Hurricane Creek, creating Hurricane Lake. The sprawling reservoir (covering 318-acres) was then opened to fishing in 1973. Located in the Blackwater River State Forest, much of the flooded timber remains in the deeper areas and has provided suitable habitat for popular sportfish. The lake has an average depth of 7 feet reaching a maximum depth of 25 feet in some areas.

The Florida FWC manages Hurricane Lake’s fishing resources with a variety of different methods:

- **Dewatering (drawdown)** - Exposes and dries the lake bottom, which aerates and consolidates organic muck deposits. This process improves sportfish habitat and increases natural production of flora and fauna. Additionally, it allows for routine maintenance and restructuring of the lake bottom.
- **Fish Stocking** – Various species (channel catfish, bream, and bass) are stocked periodically to provide unique and exciting sportfishing opportunities.
- **Fish Attractors** – Brush and other materials are placed in the lake to concentrate fish and improve angler harvest.
- **Fertilization/Liming** – Fertilizer stimulates the growth of microscopic plants called phytoplankton. It also discourages the growth of nuisance aquatic plants by shading the bottom. Liming alters the pH, alkalinity, and total hardness, improving conditions for phytoplankton and, ultimately, fish production.
